E) Comparison:

As we can see in Part C and D, the final results are complemented of each other. It is similar to applying De Morgan's law to the operations. Here is the proof:

$$(A \circ B)^{c} = A^{c} \hat{R}$$

$$(A \circ B) \oplus B^{c}$$

$$= (A \circ B)^{c} \otimes \hat{R}$$

$$= (A^{c} \oplus \hat{R}) \otimes \hat{R}$$

$$= (A^{c} \oplus \hat{R}) \otimes \hat{R}$$

$$= (A^{c} \oplus \hat{R}) \otimes \hat{R}$$
